

Course Description:

The Fairy Tale Model is a comprehensive phase model of trauma-informed treatment. This [research-supported](#) model serves as the foundation of our training programs, and is featured in Dr. Greenwald's recent books: [Child Trauma Handbook](#), [EMDR Within a Phase Model of Trauma-Informed Treatment](#), [Treating Problem Behaviors](#), [Progressive Counting](#), and the comic book, [A Fairy Tale](#). The Fairy Tale Model represents an adaptation of proven-effective methods to real-world situations, and provides a systematic guide to every step of treatment.

This 1-day workshop offers advanced clinical skills for trauma-informed evaluation, treatment planning/contracting, clinical supervision/consultation, and more. This is a **hands-on clinical skills training** for working with clients who have been exposed to significant trauma or loss. Participants should be mental health professionals (or grad students/interns) who provide and/or supervise psychotherapy.

Presenter Bio:

For information on your instructor, please visit: <https://www.childtrauma.com/about/faculty>

Target Audience: Mental health professionals (or grad students/interns) who provide and/or supervise psychotherapy.

Course Content Level: Beginner

Objectives:

Participants will be able to:

- Name and sequence the phases of treatment in the trauma-informed phase model.
- Name and sequence the experiences the brain requires for memory reconsolidation.
- Explain to clients how past trauma or loss can lead to ongoing problem behaviors or symptoms.
- Practice a systematic and comprehensive trauma-informed treatment plan.
- Discuss how to problem-solve their own (or their supervisees') challenging cases using the trauma-informed treatment perspective.
